## Open-Gangway Subways

New York City's subway cars waste as much as 5 feet of space between cars. Open-gangway cars would let people use that space and also help riders move easily inside the train.

## Build More Subway Lines

The city just opened the first part of the new Second Avenue subway line, which helps with overcrowding on Manhattan's East Side – but it took over 20 years to build, and cost over 4.5 billion dollars for just 2 miles of track and 3 new stations.

## Make Platforms and Trains Longer

While making *underground* stations longer would cost a lot of money, it might be easier to extend above-ground platforms and have longer trains to reach them – but this system could be really confusing for passengers.
